Divine Grace in Materials Science: Guruji Mahendra Trivedi's Blessings Lead to Unprecedented Advances in Polymer Research

by RVCJ DESK / Dec 28, 2023 in Living, Offbeat · Reading Time: 4 mins read

Polymers are the cornerstone of advancements across industries like pharmaceuticals, nutraceuticals, textiles, and automotive. Finding ways to enhance polymer properties like crystallinity, stability, and versatility has long intrigued researchers. In a study that could defy several established scientific theories, scientists explore the fledgling domain of Divine Grace or Consciousness to profoundly enhance characteristics of widely used cellulose derivatives – opening up applications across drug delivery technologies and theranostic platforms. By spearheading scientific inquiry beyond the molecular horizon, this research offers a profoundly unconventional yet highly compelling technique to custom-design polymers for cutting-edge pharmaceuticals, resilient composites, and stable electronic substrates – directing material scientists to expand the canvas of structure-property exploration.

The polymers selected were pharmaceutical excipients hydroxyethyl cellulose (HEC) and hydroxypropyl cellulose (HPC) which were subjected to Divine Blessings from an enlightened being. The HEC and HPC polymer samples were divided into control and treated groups. The treated groups received Blessing from Guruji Mahendra Trivedi, a renowned religious and spiritual leader and the pioneer of the Trivedi Effect, and the control groups were left unblessed for comparison. The samples were then analyzed for differences in crystallite structure, thermal properties, and elemental composition using advanced techniques such as CHNSO analysis, X-ray diffraction (XRD), Differential Scanning Calorimetry (DSC), and Thermogravimetric analysis (TGA).

The shocking results are summarized below:

The Best Movie Villains: A Quick Look at Iconic Antagonists

15 Must-Do Activities In Kolkata, The City Of Joy!

- CHNSO analysis revealed increases in oxygen and hydrogen content in Blessed HEC and HPC samples.
- XRD showed increase in crystallite size by 835% in Blessed HEC samples and decrease in crystallite size by 64% in Blessed HPC samples as compared to their controls.
- DSC indicated improved thermal stability of Blessed HEC along with increase in glass transition temperature.
- TGA confirmed greater decomposition temperature denoting enhanced thermal stability.

The significantly improved crystallinity, thermal stability and elemental balance have far-reaching implications that the scientists rightly emphasize as necessitating further studies across oral drug formulations, nutraceutical encapsulations, and controlled release applications leveraging polymer modification techniques:

In the area of pharmaceuticals research, the Blessed cellulose derivatives with enhanced temperature stability and crystallinity indices have potential to offer excipients preventing drug diffusion under varying humidity and temperatures. Spray-dried dispersions and glassy solid solutions for poorly soluble drugs also benefit from the thermally stable matrix preventing recrystallization. The tuned features additionally lend efficiency to hot-melt extrusion and spheronization processes for sustained-release tablets or beads.

In nutraceutical research, the modified polymers may provide optimal stability, consistency and crystallinity demanded by heat exposure in nutraceutical encapsulations within functional foods and beverages – preventing diffusion or leaks.

The findings also advanced the area of materials science as the major spike in HEC crystallinity and crystal dimensions opens up techniques to deliberately engineer polymer crystallite sizes and morphology to achieve targeted material properties. A core theory around crystallization suggests that polymers seldom exhibit monodisperse crystal sizes and perfect arrangements. However, the remarkably improved crystal dimensions of Blessed HEC observed in this case could indicate conditions promoting uniform crystallization – providing directions for materials scientists to expand current models. Moreover, the cracks formed in theories around pure randomization of polymer chain configurations may now need closer inspection through a probabilistic lens.

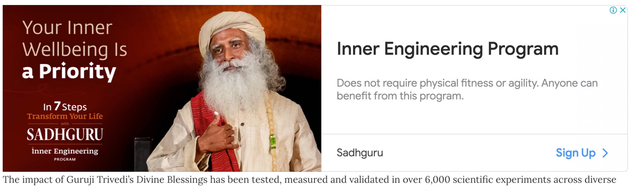
Likewise, the laws of thermodynamics face some confrontation when we consider the thermal analysis results – wherein entropy change driving deterioration of polymer stability seems overridden to manifest enhanced thermal properties in the Blessed samples. This suggests that Divine Grace or Consciousness operates at subatomic scales to reorient molecular bonds toward order rather than chaos and further investigation and analysis through this lens may reveal new paradigms in materials science.

Guruji Mahendra Kumar Trivedi is an enlightened and miraculous being, on a mission to integrate science, religion, and spirituality. He is world-renowned for his gift to transform living organisms at the cellular level, as well as non-living materials at the atomic and molecular levels, demonstrating extraordinary impossibilities that violate the known laws of science and existence.

The impact of Guruji Trivedi's Blessings on humans, animals, microbes (bacteria, viruses, fungi), plants and trees, along with non-living materials has been validated globally with cutting-edge scientific research and is published in more than 660 peer-reviewed articles in science journals worldwide with over 8,000 citations.



The impact of Guruji Trivedi's Divine Blessings has been tested, measured and validated in over 6,000 scientific experiments across diverse areas like agriculture, biotechnology, livestock, microbiology, genetics, human well-being as well as materials science and more. His breakthrough research has gained global recognition, and is indexed in more than 2,000 universities worldwide, including prestigious institutions like Harvard, Stanford, MIT, Oxford, Cambridge, and the National Institutes of Health (NIH).

The Trivedi Effect® is an unprecedented, scientifically validated phenomenon in which Divine Grace is harnessed by an enlightened being, which can then be transmitted/utilized to transform any living organism at the cellular level, including humans, animals, microbes, plants, and trees, as well as any non-living material at the atomic level, including metals, ceramics, polymers, and chemicals. This is a phenomenon discovered by Guruji Mahendra Kumar Trivedi, founder of Divine Connection, hence, it is termed the Trivedi Effect®.
